Sygnity: Financial Results for Q4 2022/23

Recommendation: sell | target price: PLN 21.60 | current price: PLN 35.30

SGN PW; SGN.WA | IT, Poland

Analyst: Paweł Szpigiel +48 509 603 258

Sygnity's financial results for the fourth quarter of fiscal 2022/23 (third quarter of calendar 2023) came well ahead of our expectations. However, the rapid rise in revenues from implementation services reported in the period, along with an unusually high gross profit margin, are not consistent with historical trends and require an explanation. One likely reason is an earlier recognition of revenue from a contract.

- Sygnity generated revenue of PLN 59.2m in Q4'22/23, marking a y/y increase of 11% y/y and a figure 15% above our estimate. There was a sharp rise in revenues from implementation services in the period to PLN 39.2m from PLN 31.6m in the corresponding year-ago quarter. Revenue from maintenance services was at a similar level as the year before.
- Gross margin came in at 35.8% after a 7.4pp y/y rebound.
- SG&A expenses amounted to PLN 9.9m vs. PLN 10.9m the quarter before and PLN 10.5m a year ago.
- $\mbox{ Other operating activity provided a PLN 0.3m gain in 4Q'22/23. }$
- EBIT amounted to PLN 11.6m, and EBITDA came in at PLN 14.0m (+119%/+76% y/y).
- After a PLN 0.2m net loss of financing activity and an effective tax rate of 21%, net profit for 4Q'22/23 amounted to PLN 9.0m.

FY2022/23 Q4 results of Sygnity

Further, this report may not be copied, duplicated and/or transmitted onward to any U.S. person, which is not the Major Institutional Investor.

In reliance on the exemption from registration provided by Rule 15a-6 of the Exchange Act and interpretations thereof by the SEC in order to conduct certain business with Major Institutional Investors, mBank SA has entered into an agreement with a U.S. registered broker-dealer, Cabrera Capital Markets. ("Cabrera"). Transactions in securities discussed in this research report should be effected through Cabrera or another U.S. registered broker dealer.

trong and weak points of valuation methods used in recommendations:

DCF - acknowledged as the most methodologically correct method of valuation; it consists in discounting financial flows generated by a company; its weak point is the significant susceptibility to a change of forecast assumptions in the model. Relative - based on a comparison of valuation multipliers of companies from a given sector; simple in construction, reflects the current state of the market better than DCF; weak points include substantial

Variability (fluctuations together with market indices) as well as difficulty in the selection of the group of comparable companies. Economic profits – discounting of future economic profits; the weak point is high sensitivity to changes in the assumptions made in the valuation model. Discounted Dividends (DDM) – discounting of thrure dividends; the weak point is high sensitivity to changes in the assumptions as to future dividends made in the valuation model. NAV – valuation based on equity value, one of the most frequently used method in case of developing companies; the weak point of the method is that it does not factor in future changes in revenue/profits

of a company.
