Ciech – Forecast of 2019 Q4 Results

Rating: buy | target price: 44.41 PLN | current price: 38.90 PLN

CIE PW; CIEP.WA | Chemicals, Poland Analyst: Jakub Szkopek +48 22 438 24 03

- Ciech will report its 2019 Q4 results on 31 March 2020.
- In the **Soda segment**, factors which shaped fourth-quarter performance included the closure of a production facility in Romania, expected to drive the quarterly sales 20% lower relative to the year-ago volume, while continuing to generate approximately PLN 18m in overheads. On the other hand, there were positive effects of decreasing costs of coking coal and natural gas while soda prices increased. As a result, in spite of lower sales, we expect the segmental EBITDA to post only a small, 4% y/y decline to PLN 118m on an adjusted basis.
- Similarly, we anticipate a 25% y/y rebound to PLN 8m in segmental EBITDA from Glass on flat sales.
- In the **Organic** segment, sales were down by an estimated 8% from the year-ago period after a 16% fall in pesticide deliveries on reduced pre-orders. With stable sales of foams and resins, we expect to see 11% y/y contraction in the segmental EBITDA.

- On the whole, on 15% lower sales, Ciech is likely to post an 8% EBITDA decline in Q4 2019 from the year-ago period. At a projected PLN 149m, the quarterly EBITDA might top our earlier forecast by PLN 8m.
- Ciech's prospects for FY2020 look brighter looking at the single-digit hikes in prices of soda deliveries ordered for the coming months.

Strong and weak points of valuation methods used in recommendations:

DCF – acknowledged as the most methodologically correct method of valuation; it consists in discounting financial flows generated by a company; its weak point is the significant susceptibility to a change of forecast assumptions in the model.

assumptions in the model.

Relative – based on a comparison of valuation multipliers of companies from a given sector; simple in construction, reflects the current state of the market better than DCF; weak points include substantial variability (fluctuations together with market indices) as well as difficulty in the selection of the group of comparable companies.

Economic profits – discounting of future economic profits; the weak point is high sensitivity to changes in the assumptions made in the valuation model.

Discounted Dividends (DDM) – discounting of future dividends; the weak point is high sensitivity to changes in the assumptions as to future dividends made in the valuation model.

NAV – valuation based on equity value, one of the most frequently used method in case of developing companies; the weak point of the method is that it does not factor in future changes in revenue/profits of a
