Stelmet – Fiscal 2020 Second-Quarter Results

Recommendation: buy | target price: PLN 9.04 | current price: PLN 8.65

STL PW; STL.WA | Industrials, Poland Analyst: Jakub Szkopek +48 22 438 24 03

Stelmet's final figures for the second quarter of fiscal 2019/2020, ended March 31st, were consistent with the preliminary results released on 17 June, which means they came ahead of our expectations. Sales of wood pellets were the biggest positive surprise of the quarter, while sales of garden structures and operating costs were in line. Stelmet has been able to stem falls in UK sales of garden features, albeit at the expense of profit margins. The Company says the coronavirus pandemic had a limited impact on business in the first calendar quarter.

Quarterly sales ${\bf revenue}$ exceeded our estimate by 4% at PLN 182m, owing among others to 40% higher-than-anticipated revenues from wood pellets.

The volume of **garden structures** sold in the second quarter amounted to 87,700 cubic meters, representing a 6% decline from the same period a year earlier. Geographically, the UK

sales volumes rebounded 34% year-over-year, resulting in a 39% beat versus our estimate, while sales in France were 14% off after falling 23% on the year. The **average quarterly selling price** for garden structures turned out 2% lower than anticipated, due mainly to heavier markdowns in the UK, where the average price was 5% lower than in the year-ago period.

Sales of **wood pellets** showed a strong beat after soaring by 33% year over year despite warm outside temperatures. The average pellet sales price for the quarter was 5% lower than the year before but 5% higher than anticipated by us.

Operating cash flow in fiscal Q2 was negative at PLN -20m vs. PLN -16m the year before. As a result, **net debt** in the period decreased by PLN 35m to PLN 176m $(2.3 \times 12 \text{M EBITDA})$. Stelmet reports seasonal rises in debt in the second and third quarter, followed by decreases in Q4.

o an agreement with a U.S. registered broker-dealer, Cabrera Capital Markets. ("Cabrera"). Transactions in securities discussed in this research report should be effected through Cabrera or another U.S. registered broker

Strong and weak points of valuation methods used in recommendations:

DCF - acknowledged as the most methodologically correct method of valuation; it consists in discounting financial flows generated by a company; its weak point is the significant susceptibility to a change of forecast assumptions in the model.

assumptions in the model.

Relative – based on a comparison of valuation multipliers of companies from a given sector; simple in construction, reflects the current state of the market better than DCF; weak points include substantial variability (fluctuations together with market indices) as well as difficulty in the selection of the group of comparable companies.

Economic profits – discounting of future economic profits; the weak point is high sensitivity to changes in the assumptions made in the valuation model.

Discounted Dividends (DDM) – discounting of future dividends; the weak point is high sensitivity to changes in the assumptions as to future dividends made in the valuation model.

NAV - valuation based on equity value, one of the most frequently used method in case of developing companies; the weak point of the method is that it does not factor in future changes in revenue/profits of a company.
