Santander Bank Polska – Forecast of 2020 Q3 Results

Rating: buy | target price: PLN 179.37 | current price: PLN 144.20

SPL PW; SPL1.WA | Banks, Poland

Analysts: Michał Konarski +48 22 438 24 05, Mikołaj Lemańczyk +48 22 438 24 07

- Santander Bank Polska will report Q3 2020 results on 27 October 2020 (Tuesday).
- We estimate the Q3 2020 net profit to stand at PLN 259.8m, down by 14.8% QoQ and down by 58.5% YoY.
- A consensus of quarterly forecasts is not available yet.
- We expect Santander to post additional provisions for CHF litigations of approx. PLN 60m in Q3 2020 and further COVID-19 provisions of approx. PLN 30m.
- We expect net interest income to drop by 4% QoQ and 18% YoY due to the low interest rate environment and normalisation of results of Santander Consumer Bank, which posted approx. PLN 90m in positive one-offs in H1 2020.
- We expect net commission income to increase by 5% QoQ as customer activity is getting back to normal.
- After the release of staff-related provisions in Q2, we expect staff-related expenses to normalise in Q3, translating into an overall increase in costs of 2% QoQ. Our projection is based on the assumption of additional provisions for CHF litigations of approx. PLN 60m. Contrary to Q2, we do not expect additional costs related to the return of excess commissions paid by customers.

- We expect net provisions to be at PLN 480.9m, translating into a risk cost of 130 bps (in relation to gross average loans). Our forecast is also based on the assumption that the bank will create COVID-19 provisions worth approx. PLN 30m, even though we do not expect the NPL ratio to grow significantly.
- Even though the results are weaker QoQ and YoY, we look at them from the perspective of our annual forecast, which currently seems to be too conservative. Assuming that Santander will repeat the Q3 result in the last quarter of the year, our forecast and the consensus should be revised upwards by 11% and 5%, respectively. At the same time, one should remember that in Q3 banks are likely to post the worst net interest income this year, as a result of which this and next year's figures may be revised upwards even more. We believe that the biggest surprise in results may come from net provisions or additional CHF provisions.

2020 Q3 estimates vs. pri	ior periods
---------------------------	-------------

		20120	201202	D /D	a (a
(PLN m)	3Q'19	2Q'20	3Q'20P	R/R	Q/Q

Recommendations are based on essential data from the entire history of a company being the subject of a recommendation, with particular emphasis on the period since the previous recommendation. Investing in shares is connected with a number of risks including, but not limited to, the macroeconomic situation of the country, changes in legal regulations as well as changes on commodity markets. Full elimination of these risks is virtually impossible.

In reliance on the exemption from registration provided by Rule 15a-6 of the Exchange Act and interpretations thereof by the SEC in order to conduct certain business with Major Institutional Investors, mBank SA has entered dealer.

Strong and weak points of valuation methods used in recommendations: DCF – acknowledged as the most methodologically correct method of valuati

valuation; it consists in discounting financial flows generated by a company; its weak point is the significant susceptibility to a change of forecast Relative - based on a comparison of valuation multipliers of companies from a given sector; simple in construction, reflects the current state of the market better than DCF; weak points include substantial variability Relative -

(fuctuations to gother with market indices) as well as difficulty in the selection of the group of comparise function, remeas the current state of the market better than b **Economic profits** – discounting of future economic profits; the weak point is high sensitivity to changes in the assumptions as to future dividends made in the valuation model. Discounted Dividends (DDM) – discounting of future dividends; the weak point is high sensitivity to changes in the assumptions as to future dividends made in the valuation model.

NAV - valuation based on equity value, one of the most frequently used method in case of developing companies; the weak point of the method is that it does not factor in future changes in revenue/profits of a company.
